

Cabotegravir

Status - AVAILABLE

Fostemsavir

Status – NOT AVAILABLE

At this time, fostemsavir is not available through compassionate use request. Current manufacturing restrictions were identified during a routine quality analysis and have significantly limited ViiV Healthcare's ability to produce future clinical supplies of fostemsavir. While ViiV Healthcare is working to resolve the manufacturing restriction, the resulting fostemsavir shortage requires that we suspend new enrollment into the fostemsavir Compassionate Use Program and prioritize continued fostemsavir access to participants who have no alternative treatment options and are already receiving fostemsavir in either the Compassionate Use Program or the ongoing Phase 3 study.

We anticipate resuming enrollment in the Compassionate Use Program in late 2019. If you would like to be contacted once the program reopens, please provide your name and contact details to www.FostemsavirCompassionateUse@viivhealthcare.com
